

Week 08 Project Lab - Dynamic Data & Fetch API

Start from: Week 07 added validation and saved lightweight user choices.
Finish with: Destination and event cards are generated from JSON data instead of repeated static HTML.

Lab Goal

Decouple content from structure by loading and rendering dynamic external data.

Build Tasks

1. Create destinations.json
2. Fetch the JSON file from JavaScript
3. Render cards into the DOM
4. Add search or category filtering
5. Show loading and error states

Key Code Reminder

```
const response = await fetch("data/destinations.json");  
if (!response.ok) throw new Error("Data failed to load");  
const destinations = await response.json();
```

Testing Checklist

Check	Result
Run through a local web server	Pass / Fix needed
Break the JSON path and observe the error state	Pass / Fix needed
Test filters with empty results	Pass / Fix needed
Check rendered cards preserve accessibility labels	Pass / Fix needed

Submit

- GitHub repository URL
- Week 08 commit message or commit hash
- Screenshot of the completed feature

- 2-4 sentence test note

Next

Week 09 checks usability, accessibility and the quality of the interactive site.
