

Week 01

Project Discovery & Planning

Define the project problem, identify users/tasks, and structure the site architecture.

Learning outcomes

Define the project problem, identify users/tasks, and structure the site architecture.
Explain the core programming/design concept for this week
Read and modify key code patterns
Test the weekly project increment
Prepare evidence for GitHub submission

Today's problem

Why it matters

Plan the problem, the users and the content before choosing colours or writing HTML.

Project before -> after

Before Week 01

A website idea only; no project evidence or code structure exists.

After Week 01

A documented project plan and repository scaffold ready for semantic HTML.

What we build this week

Write a purpose statement
Create three user personas
Write five user stories with acceptance checks
Draw the sitemap and homepage wireframe
Create README.md and placeholder
index.html

Core principle

Plan the problem, the users and the content before choosing colours or writing HTML.

Keep in mind

A good web developer can point to the code, the browser result, and the user reason behind the decision.

Key concepts

Concept 1

Problem statements guide feature decisions

Concept 2

Personas represent realistic user tasks

Concept 3

Sitemaps plan pages; wireframes plan page layout

Project anatomy

Key code pattern A

```
# Morobe Discover  
Week 01 creates planning evidence.
```

```
## Output  
- Project brief  
- User stories  
- Sitemap
```

Explain it

Which file contains this code?
Which line creates the visible change?
What should appear in the browser?

Code -> visual result

```
# Morobe Discover  
Week 01 creates planning evidence.  
  
## Output  
- Project brief
```

What changed?

Project file changed for Project Discovery & Planning
The browser output is now closer to the required weekly evidence
The change supports a user task or quality requirement
The change can be tested and committed

Key code pattern B

```
Home
├── Destinations
├── Events
├── Plan a Trip
└── About
```

Why this pattern is needed

The second pattern usually applies the same idea to a different component, state, layout or data flow.

Apply it to Morobe Discover

Write a purpose statement
Create three user personas
Write five user stories with acceptance checks
Draw the sitemap and homepage wireframe

Compare the approaches

Weak approach

Memorise the definition
Copy code without understanding
No browser evidence
No test note

Professional approach

Explain the concept
Apply the correct code pattern
Inspect the result
Commit and describe the evidence

Common mistake

Mistake

The page appears unchanged, but the student assumes the feature is complete.

Correction

Check the correct file, refresh the browser, inspect DevTools, and verify the expected output.

Why does this fail?

```
// Broken checkpoint  
// File changed, but the browser result does not  
change.  
// Possible causes:  
// - wrong file  
// - file not linked  
// - syntax error  
// - browser not refreshed
```

Class question

Which cause would you check first, and why?

Fix the problem

- Confirm the browser is opening the correct file
- Check links to CSS/JS/data files
- Inspect the console for errors
- Use a small working example
- Test again before committing

Class activity

Activity - 7 minutes

Given “make a tourism website”, rewrite it as a testable project problem.

Work in pairs

Point to the project evidence

Prepare one answer to share

Implementation steps 1-3

Write a purpose statement

Create three user personas

Write five user stories with acceptance checks

Implementation steps 4-5

Draw the sitemap and homepage wireframe
Create README.md and placeholder index.html

LIVE DEMO

Demo checklist

1. Open the current project
2. Locate the affected file
3. Add or modify the key code
4. Refresh the browser
5. Inspect the result
6. Explain the change

Predict the output

```
Home
├── Destinations
├── Events
├── Plan a Trip
└── About
```

Prediction prompt

What should change on screen when this code is applied correctly?

Browser result

Testing the feature

Open index.html in the browser
Check user stories include user, goal and reason
Confirm the sitemap matches the planned pages
Commit evidence to Git

Inspect with browser tools

Inspection path

Right click -> Inspect
Elements panel -> structure/classes
Console -> JavaScript errors
Network/Application -> data/storage when relevant

Evidence to save

Screenshot
Short test note
Changed files
Git commit message

Git evidence

```
git add .  
git commit -m "Week 01 Project Discovery & Planning  
project increment"
```

Why it matters

Git history shows progression from Week 01 to final deployment. It is part of the assessment evidence.

Complete source code

Repository:
`https://github.com/YOUR-USERNAME/is229-morobe-discover`

Weekly folder:
`/week-01/`

Complete project:
`/complete-project/`

Reminder

Do not paste a whole file into a slide. Use the repository for complete code.

Mini challenge

Challenge

Modify one part of the Week 01 implementation and explain what changed in the browser.

State the file edited

State the line/section changed

Show the before and after result

What counts as evidence?

Technical evidence

Changed code files
Browser screenshot
Test note
Git commit

Understanding evidence

Code explanation
Why this method fits
Connection to previous week
Connection to next week

Project lab handoff

Write a purpose statement
Create three user personas
Write five user stories with acceptance checks
Draw the sitemap and homepage wireframe
Create README.md and placeholder index.html

Definition of done

Week 01 feature is implemented
Project still preserves earlier week features
Browser result matches the expected output
Test note and screenshot are saved
Git commit message is meaningful

What we built today

A documented project plan and repository scaffold ready for semantic HTML.

Evidence: Project brief, user stories, sitemap, wireframes, repository scaffold, purpose statement and user personas

Technology: Git / Planning Tools / Markdown

Lecture summary

Plan the problem, the users and the content before choosing colours or writing HTML.

Problem statements guide feature decisions

Personas represent realistic user tasks

Testing and Git are part of development, not extras

Prepare for next class

Finish this week's lab before the next class
Read the next topic in advance
Bring the current project ready to extend
Be ready to explain one code decision

Exit question

How did Week 01 improve Morobe Discover, and what will the next week build on?
