

Week 13

Deployment & Release

Publish a production-ready website to a live public URL.

Learning outcomes

Publish a production-ready website to a live public URL.
Explain the core programming/design concept for this week
Read and modify key code patterns
Test the weekly project increment
Prepare evidence for GitHub submission

Today's problem

Why it matters

Release joins the technical product, documentation, testing evidence and public URL into one final deliverable.

Project before -> after

Before Week 13

Week 12 produced test evidence and fixed quality issues.

After Week 13

The project is uploaded, documented, deployed and ready for final demonstration/code defence.

What we build this week

Finish README and run instructions
Check final file paths and assets
Push final code to GitHub
Enable GitHub Pages
Prepare a user-journey-based demonstration

Core principle

Release joins the technical product, documentation, testing evidence and public URL into one final deliverable.

Keep in mind

A good web developer can point to the code, the browser result, and the user reason behind the decision.

Key concepts

Concept 1

README documents purpose and running instructions

Concept 2

Git history proves progress

Concept 3

Deployment reveals path and asset problems

Project anatomy

Key code pattern A

```
git add .  
git commit -m "Week 13 final release"  
git push origin main
```

Explain it

Which file contains this code?
Which line creates the visible change?
What should appear in the browser?

Code -> visual result

```
git add .  
git commit -m "Week 13 final release"  
git push origin main
```

What changed?

Project file changed for Deployment & Release

The browser output is now closer to the required weekly evidence

The change supports a user task or quality requirement

The change can be tested and committed

Key code pattern B

```
Repository -> Settings -> Pages  
Source: main branch  
Folder: /complete-project
```

Why this pattern is needed

The second pattern usually applies the same idea to a different component, state, layout or data flow.

Apply it to Morobe Discover

Finish README and run instructions
Check final file paths and assets
Push final code to GitHub
Enable GitHub Pages

Compare the approaches

Weak approach

- Memorise the definition
- Copy code without understanding
- No browser evidence
- No test note

Professional approach

- Explain the concept
- Apply the correct code pattern
- Inspect the result
- Commit and describe the evidence

Common mistake

Mistake

The page appears unchanged, but the student assumes the feature is complete.

Correction

Check the correct file, refresh the browser, inspect DevTools, and verify the expected output.

Why does this fail?

```
// Broken checkpoint
// File changed, but the browser result does not
change.
// Possible causes:
// - wrong file
// - file not linked
// - syntax error
// - browser not refreshed
```

Class question

Which cause would you check first, and why?

Fix the problem

- Confirm the browser is opening the correct file
- Check links to CSS/JS/data files
- Inspect the console for errors
- Use a small working example
- Test again before committing

Class activity

Activity - 7 minutes

Demonstrate one user story from requirement to live webpage evidence.

Work in pairs

Point to the project evidence

Prepare one answer to share

Implementation steps 1-3

Finish README and run instructions
Check final file paths and assets
Push final code to GitHub

Implementation steps 4-5

Enable GitHub Pages

Prepare a user-journey-based demonstration

LIVE DEMO

Demo checklist

1. Open the current project
2. Locate the affected file
3. Add or modify the key code
4. Refresh the browser
5. Inspect the result
6. Explain the change

Predict the output

```
Repository -> Settings -> Pages  
Source: main branch  
Folder: /complete-project
```

Prediction prompt

What should change on screen when this code is applied correctly?

Browser result

Testing the feature

Open the public URL

Test navigation after deployment

Check console and missing assets

Trace final features back to Week 01 user stories

Inspect with browser tools

Inspection path

Right click -> Inspect
Elements panel -> structure/classes
Console -> JavaScript errors
Network/Application -> data/storage when relevant

Evidence to save

Screenshot
Short test note
Changed files
Git commit message

Git evidence

```
git add .  
git commit -m "Week 13 Deployment & Release project  
increment"
```

Why it matters

Git history shows progression from Week 01 to final deployment. It is part of the assessment evidence.

Complete source code

Repository:
`https://github.com/YOUR-USERNAME/is229-morobe-discover`

Weekly folder:
`/week-13/`

Complete project:
`/complete-project/`

Reminder

Do not paste a whole file into a slide. Use the repository for complete code.

Mini challenge

Challenge

Modify one part of the Week 13 implementation and explain what changed in the browser.

State the file edited

State the line/section changed

Show the before and after result

What counts as evidence?

Technical evidence

Changed code files
Browser screenshot
Test note
Git commit

Understanding evidence

Code explanation
Why this method fits
Connection to previous week
Connection to next week

Project lab handoff

- Finish README and run instructions
- Check final file paths and assets
- Push final code to GitHub
- Enable GitHub Pages
- Prepare a user-journey-based demonstration

Definition of done

Week 13 feature is implemented
Project still preserves earlier week features
Browser result matches the expected output
Test note and screenshot are saved
Git commit message is meaningful

What we built today

The project is uploaded, documented, deployed and ready for final demonstration/code defence.
Evidence: README, GitHub Pages deployment and final demo
Technology: Git / GitHub

Lecture summary

Release joins the technical product, documentation, testing evidence and public URL into one final deliverable.

README documents purpose and running instructions

Git history proves progress

Testing and Git are part of development, not extras

Prepare for next class

Finish this week's lab before the next class
Read the next topic in advance
Bring the current project ready to extend
Be ready to explain one code decision

Exit question

How did Week 13 improve Morobe Discover, and what will the next week build on?
