

13 Deployment & Release

Prepared by Mr. Maxie
Cletus Tepaiyan
School of Business Studies |
PNG University of
Technology

Objectives

You will have mastered the material in this chapter when you can:

- Publish a production-ready website to a live public URL.
- Identify how this week builds from the previous project checkpoint.
- Read and interpret key code snippets related to the feature.
- Explain how this week prepares the next project stage.
- Explain the key concepts and terminology for this week.
- Apply the new technique to the Morobe Discover project.
- Test the weekly project increment and record evidence.

Introduction

Deployment & Release introduces the next major layer of the Morobe Discover website. This chapter is written for students who are building the same project from start to final release. The topic is not treated as a separate exercise; it is a practical step in developing one working website.

A website is not professionally complete until it can be accessed, explained, tested and maintained. Professional web development requires students to understand why a technique exists, what problem it solves, and how it changes the behaviour or quality of a webpage.

Project - Morobe Discover

Morobe Discover is a tourism and local discovery website. Each week adds a working layer to the project. This week the project moves from **Week 12 produced test evidence and fixed quality issues.** to **The project is uploaded, documented, deployed and ready for final demonstration/code defence.**

Figure 13-1. Current project focus for Week 13: Deployment & Release.

By the end of the chapter, the project evidence should clearly show the development focus for this week: **README, GitHub Pages deployment and final demo.**

Before This Week and After This Week

Before Week 13	After Week 13
Week 12 produced test evidence and fixed quality issues.	The project is uploaded, documented, deployed and ready for final demonstration/code defence.
Project evidence from the previous checkpoint must be preserved.	The new feature becomes the starting point for Final demonstration.

Weekly Development Roadmap

1 Review current project	2 Understand the main concept	3 Inspect the interface problem	4 Study the key code
5 Apply it to the project	6 Test the result	7 Commit evidence	8 Prepare for next week

This roadmap mirrors a professional workflow. Students first inspect the current project state, then learn the concept, apply key code, test the visible result and commit the evidence.

1. Core Principle

Release joins the technical product, documentation, testing evidence and public URL into one final deliverable.

Developer Tip: A good web developer can explain not only what code was written, but why that code is appropriate for the user task and project context.

Concepts Introduced This Week

Concept	Purpose	Project use
README documents purpose and running instructions	Morobe Discover application	Used in Week 13 project evidence
Git history proves progress	Morobe Discover application	Used in Week 13 project evidence
Deployment reveals path and asset problems	Morobe Discover application	Used in Week 13 project evidence

The concepts in this chapter are introduced in small pieces. Each piece is immediately connected to the Morobe Discover project so that students can see how the idea becomes working project evidence.

2. Explain - Illustrate - Apply

The first step is to understand the interface or coding problem. A weak implementation usually focuses on surface appearance only. A stronger implementation identifies the structural or interaction principle and applies it consistently.

Weak approach

Add code until the page appears to work.
Ignore structure, reusability or testing.

Professional approach

Use the correct concept, name the affected component, test the output and commit evidence.

Thinking Question

Question: How does this week improve the website for the user, not just for the developer?

Answer: It makes the current project easier to use, understand, interact with, test or release.

3. Key Code Pattern A

The following code shows the smallest useful pattern for this week's implementation. It is not a complete project file. The complete project belongs in the GitHub repository under */ week-13/*.

```
git add .  
git commit -m "Week 13 final release"  
git push origin main
```

Read the code line by line. Identify the selector, tag, function or command being used. Then identify the visible effect it should produce in the project.

Figure 13-2. Code should be checked against visible output in the browser.

4. Key Code Pattern B

Most weeks require a second pattern that builds on the first. The second pattern usually applies the concept to a different component, state or project file.

```
Repository -> Settings -> Pages  
Source: main branch  
Folder: /complete-project
```

Good Practice: Keep code readable, named and testable. Avoid copying code that you cannot explain during a code defence.

What to Inspect

- Which file should contain this code?
- Which part of the browser output should change?
- What error would appear if the code were placed in the wrong file?

5. Applying the Concept to Morobe Discover

Implementation should be completed as a project increment, not as an isolated demonstration. The following steps describe the development path.

To Build the Week 13 Feature

1. Finish README and run instructions
2. Check final file paths and assets
3. Push final code to GitHub
4. Enable GitHub Pages
5. Prepare a user-journey-based demonstration

Each step should be performed against the same Morobe Discover project folder. Do not create a separate mini-site for this week.

Project Rule: Preserve earlier features. This week adds a layer to the project; it does not replace previous work.

6. Visual Result and Interface Evidence

The browser result is part of the evidence. Students should compare the interface before and after the week to confirm that the new concept has actually changed the site in the intended way.

Figure 13-3. Expected Week 13 project output evidence.

Evidence item	What it proves
Screenshot	The feature is visible to the user.
Code file	The implementation exists in the correct location.
Test note	The student checked the behaviour.
Git commit	The project history records the checkpoint.

7. Common Mistake and Correction

Common Mistake: Treating this week's topic as a definition to memorise instead of a technique to apply to the project.

Incorrect approach

The student can define the concept but cannot show where it appears in the Morobe Discover files or browser output.

Correction

Open the relevant project file, locate the code pattern, refresh the browser and explain the output. A student should be able to point to the exact line of code and the exact interface region affected.

```
// Explain during code defence  
File: week-13/...  
Feature: Deployment & Release  
Evidence: browser screenshot + Git commit
```

8. Testing and Validation

Every weekly increment must be tested. Testing confirms that the feature is useful, not just present.

Check	Expected result
Open the public URL	Expected project behaviour is visible and working.
Test navigation after deployment	Expected project behaviour is visible and working.
Check console and missing assets	Expected project behaviour is visible and working.
Trace final features back to Week 01 user stories	Expected project behaviour is visible and working.

Incorrect result and correction: If the page appears unchanged after editing a file, confirm that you edited the correct file, linked the file properly and refreshed the browser. Then inspect the browser console where relevant.

9. GitHub and Project Evidence

The complete implementation for this week should be stored in the project repository, not copied in full into this chapter. The chapter shows key code only so that students focus on understanding.

```
Suggested repository:  
https://github.com/YOUR-USERNAME/is229-morobe-discover
```

```
Weekly folder:  
/week-13/
```

```
Complete project:  
/complete-project/
```

Commit Message Example

```
git add .  
git commit -m "Week 13 Deployment & Release project increment"
```

10. Completed Weekly Outcome

At the end of Week 13, the project should demonstrate the following completed outcome:

Completed outcome: README, GitHub Pages deployment and final demo

Definition of Done

Done when...	Evidence
The project includes the Week 13 feature.	Updated files in /week-13/
The feature can be explained using key concepts.	Student code explanation
The feature works in the browser.	Screenshot and test note
The work is version-controlled.	Git commit / repository history

11. Bridge to the Next Week

Final demo and code defence: explain how the project satisfies the original user stories.

Week 13 output	Next use
README, GitHub Pages deployment and final demo	Final demo and code defence: explain how the project satisfies the original user stories.

This bridge is important because the course uses one cumulative project. The work produced this week becomes part of the starting point for the next class.

Chapter Summary

This chapter introduced Deployment & Release as a practical development step in the Morobe Discover project. You learned the principle behind the topic, studied key code patterns, applied the concept to the project, tested the result and prepared evidence for GitHub.

Apply What You Learned

1. Demonstrate one user story from requirement to live webpage evidence.
2. Identify the exact project file that should change this week.
3. Explain how the browser output proves the feature works.
4. Write one test note for the weekly feature.
5. Explain how this week connects to the next week.

Before the next class: Read the next week's material and bring your current project with this week's feature completed and committed.
